Stamp cleaner 1064

COLORIS®

Alcohol-based solvent mixture for cleaning stamps and stamp blocks soiled or sticky with solvent-based ink.

Properties:
Recommended for cleaning rubber and metal stamps. (On photo polymer stamps, the compatibility should be checked carefully on a small area, because otherwise the danger exists of the stamp material swelling and destroying the print block.) Also suitable for removing ink spatter which has not yet dried on non-porous surfaces. On porous surfaces also check the cleaning effect and compatibility before extensive use.

Application:
We recommend this stamp cleaner for all solvent-base inks such as:
Stamping inks R 9, BA 4710, CO 4713, KRO 4714 P, KROSKA P, 50, 121 P, 186, 200 PR, 337, 382 P, 794 I P, 947 IV, 1026, or 8080 P. Other inks can usually also be removed with this cleaner, however, it is better to check in each individual case.

Viscosity:
low viscosity, ~12sec
(Ford 4mm cup)

Cleaning instructions:
Scrape off dry ink residues carefully with a sharp blade. Then saturate a soft cotton rag with the fluid and carefully wipe off stamp or print block.

Caution:
Never allow stamp or print block to soak or leave in cleaner for a longer period of time - even if heavily soiled.

Available standard sizes:
50ml/g · 250ml/g · 1000ml/g
